Sommario/riassunto

How can developing countries maximize some of the beneficial rules and policies provided to them by the EU and international organizations to reduce public health plight in terms of inadequate access to medicines and vaccines? By navigating some of the complex European and international rules and policies that have hitherto been put in place to ease access to affordable healthcare, the author identifies ways in which policy makers and legislators can optimally use extant rules to enhance healthcare provision.

Sommario/riassunto	Due to their distinctive properties, ionic liquids have attracted the great and unflagging interest of researchers for over 30 years. This interest has been focused mainly on their use as a green alternative to volatile organic solvents. However, they often act not only as solvents but also as catalysts, catalyst immobilizers and initiators. Over 100 types of chemical reactions are known in which ionic liquids (ILs) were applied successfully. This Special Issue is aimed at showing the most recent advances and trends in the design, synthesis and characterization of catalysts based on ILs, as well as presenting their activity and application potential.
