

1. Record Nr.	UNINA9910458802003321
Titolo	Bayesian adaptive methods for clinical trials / / Scott M. Berry. [et al.]
Pubbl/distr/stampa	Boca Raton : , : Chapman & Hall/CRC, , 2011
ISBN	0-429-15242-6 1-282-90299-7 9786612902994 1-4398-2551-3
Descrizione fisica	1 online resource (316 p.)
Collana	Chapman & Hall/CRC biostatistics series ; ; 38
Altri autori (Persone)	BerryScott M
Disciplina	615.5072/4
Soggetti	Clinical trials - Statistical methods Bayesian statistical decision theory Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Front cover; Contents; Foreword; Preface; CHAPTER 1: Statistical approaches for clinical trials; CHAPTER 2: Basics of Bayesian inference; CHAPTER 3: Phase I studies; CHAPTER 4: Phase II studies; CHAPTER 5: Phase III studies; CHAPTER 6: Special topics; References; Back cover
Sommario/riassunto	As has been well-discussed, the explosion of interest in Bayesian methods over the last 10 to 20 years has been the result of the convergence of modern computing power and efficient Markov chain Monte Carlo (MCMC) algorithms for sampling from and summarizing posterior distributions. Practitioners trained in traditional, frequentist statistical methods appear to have been drawn to Bayesian approaches for three reasons. One is that Bayesian approaches implemented with the majority of their informative content coming from the current data, and not any external prior information, typically have good frequentist properties (e.g., low mean squared error in repeated use). Second, these methods as now readily implemented in WinBUGS and other MCMC-driven software packages now over the simplest approach to hierarchical (random effects) modeling, as routinely needed in longitudinal, frailty, spatial, time series, and a wide variety of other settings featuring interdependent data. Third, practitioners are

attracted by the greater flexibility and adaptivity of the Bayesian approach, which permits stopping for efficacy, toxicity, and futility, as well as facilitates a straightforward solution to a great many other specialized problems such as dose-finding, adaptive randomization, equivalence testing, and others we shall describe. This book presents the Bayesian adaptive approach to the design and analysis of clinical trials--Provided by publisher.

2. Record Nr.	UNINA9910674024603321
Titolo	Monoclonal Antibodies / / edited by Christian Klein
Pubbl/distr/stampa	Basel, Switzerland : , : MDPI - Multidisciplinary Digital Publishing Institute, , 2018
Descrizione fisica	1 online resource (238 pages) : illustrations
Disciplina	616.0793
Soggetti	Monoclonal antibodies
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Monoclonal antibodies are established in clinical practice for the treatment of cancer, and autoimmune and infectious diseases. The first generation of antibodies has been dominated by classical IgG antibodies, however, in the last decade, the field has advanced, and, nowadays, a large proportion of antibodies in development have been engineered. This Special Issue on "Monoclonal Antibodies" includes original manuscripts and reviews covering various aspects related to the discovery, analytical characterization, manufacturing and development of therapeutic and engineered antibodies.

3. Record Nr.	UNISA996540330203316
Autore	Jackel Florian
Titolo	"Wenn wir sagen, dass der Tropfen Mensch wird" : Vorstellungen ungeborenen Lebens bei Bar Ebraya (1226-1286 n. Chr.) // Florian Jackel
Pubbl/distr/stampa	Baden-Baden : , : Ergon Verlag, , [2022]
ISBN	9783956509278
Descrizione fisica	1 Online Ressource
Collana	Recht, Ethik und Gesellschaft im Vorderen Orient, ; ; Band 2
Disciplina	306.6
Soggetti	Fetus - Religious aspects Theology, Doctrinal - History - To 1500
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"Vorstellungen des Ungeborenen finden sich seit der Antike in medizinischen, philosophischen und theologischen Texten. Die bisherige Forschung untersucht Gemeinsamkeiten und Unterschiede dieser Vorstellungen in verschiedenen gelehrten und religiösen Kontexten, weist allerdings für die syrisch-christliche Literatur eine Leerstelle auf. Dieses Buch stellt einen grundlegenden Beitrag zum Schließen dieser Lucke und zur transkulturellen Philosophiegeschichte dar. Es untersucht mehrere wichtige Werke des bedeutenden Universalgelehrten Bar Ebraya und zeichnet dessen literarische Bearbeitung griechisch-philosophischer, christlicher und islamischer Vorlagen zu einer eigenständigen "embryologischen Synthese" nach"-- Provided by publisher.
