Sommario/riassunto

Three Upper Palaeolithic sites have been discovered during the construction of the A5 motorway between Melun and Troyes. Marolles-sur-Seine, in the Seine-et-Marne area, is related to the other Magdalenian sites discovered in the Paris basin. The excellent preservation of the finds (silex, animal bones, heated stones) has made possible a palaeo ethnological study of this horse hunting site, a type of research rarely possible in a rescue excavation. Technological analysis of the lithic from Lailly (Aurignacian), in the Yonne area, and Fontvannes (Perigordian ?), in the Aube area, has revealed the production techniques for three kinds of artefacts blades, flakes and bladelets. These two sites increase the importance of the Vanne valley in the understanding of occupation of the south east of the Paris basin.
