

1. Record Nr.	UNINA9910677095803321
Autore	Bose Bimal K.
Titolo	Power Electronics in Renewable Energy Systems and Smart Grid : Technology and Applications / / edited by Bimal K. Bose
Pubbl/distr/stampa	Piscataway, New Jersey : , : Wiley-IEEE Press, , [2019] [Piscataway, New Jersey] : , : IEEE Xplore, , [2019]
ISBN	1-119-51565-3 1-119-51566-1 1-119-51564-5
Descrizione fisica	1 online resource (744 pages) : illustrations (some color), charts
Collana	IEEE Press series on power engineering
Disciplina	621.317
Soggetti	Power electronics Renewable energy sources
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface xiii -- About the editor xix -- About the contributors xxi -- List of abbreviations xxxiii -- Chapter 1 Energy, Environment, Power Electronics, Renewable Energy Systems, and Smart Grid 1 /Bimal K. Bose and Fei (Fred) Wang -- 1.1 Introduction 1 -- 1.2 Energy 1 -- 1.3 Environment 4 -- 1.3.1 Environmental Pollution by Fossil Fuels 4 -- 1.3.2 Climate Change or Global Warming Problems 7 -- 1.3.3 Several Beneficial Effects of Climate Change 11 -- 1.3.4 The Kyoto Protocol and Carbon Emission Control 12 -- 1.3.5 How Can We Solve or Mitigate Climate Change Problems? 13 -- 1.4 Power Electronics 14 -- 1.4.1 The Role of Power Electronics in Renewable Energy Systems and Grids 14 -- 1.4.2 Fundamentals of Power Electronics 16 -- 1.4.3 Power Electronics Applications 35 -- 1.5 Renewable Energy Systems 48 -- 1.5.1 Wind Energy Systems 50 -- 1.5.2 PV Systems 52 -- 1.5.3 Grid Energy Storage 53 -- 1.6 Smart Grid 54 -- 1.6.1 FACTS Technologies 54 -- 1.6.2 HVDC Technologies 60 -- 1.6.3 DC Grid and Supergrid 66 -- 1.6.4 Power Electronics for Distribution Grids 73 -- 1.7 Summary and Future Trends 76 -- Acknowledgments 78 -- References 78 -- Chapter 2 Power Semiconductor Devices for Smart Grid and Renewable Energy Systems 85 /Alex Q. Huang -- 2.1 Introduction 85 -- 2.2 Power

Semiconductor Device Operation in Power Converters	87
2.2.1 Commercially Available Power Semiconductor Devices	87
2.2.2 Modern Power Semiconductor Device Characteristics	90
2.3 State-of-the-Art Power Semiconductors: A Comparison	101
2.3.1 Voltage Rating	102
2.3.2 Current Rating	103
2.3.3 Switching Frequency	108
2.3.4 Maximum Junction Temperature	114
2.4 Recent Innovations in SI Power Devices	117
2.4.1 Silicon Superjunction (SJ)	117
2.4.2 Thin Wafer Field Stop IGBT (FS-IGBT)	119
2.4.3 Reverse Conducting IGBT (RC-IGBT)	123
2.4.4 Reverse Blocking IGBT	124
2.4.5 Integrated-Gate-Commutated Thyristor (IGCT)	124
2.5 Recent Innovations in WBG Power Devices	127
2.5.1 SiC and GaN Diodes	128
2.5.2 SiC MOSFET	131
2.5.3 Ultra High-Voltage SiC Power Devices	135
2.5.4 GaN Heterojunction Field Effect Transistor	137
2.6 Smart Grid and Renewable Energy System Applications	138
2.7 Conclusions	144
References	144
Chapter 3 Multilevel Converters - Configuration of Circuits and Systems	153
Hirofumi Akagi	153
3.1 Introduction	153
3.1.1 Historical Review of Multilevel Converters	153
3.1.2 Overview of Chapter 3	155
3.2 Multilevel NPC and NPP Inverters	155
3.2.1 Circuits of Three-Level NPC and NPP Inverters	155
3.2.2 Principles of the Three-Level NPC and NPP Inverters	156
3.2.3 Comparisons Between the Three-Level NPC and NPP Inverters	158
3.2.4 Five-Level NPC Inverters	160
3.3 Multilevel FLC Inverters and Hybrid FLC Inverters	161
3.3.1 Circuits of the Three-Level and Four-Level FLC Inverters	161
3.3.2 Principles of the Three-Level FLC Inverter	162
3.3.3 Hybrid Four-Level and Five-Level FLC Inverters	162
3.4 Modular Multilevel Cascade Converters	164
3.4.1 Terminological Issue and Solution	164
3.4.2 Circuits and Individualities of Six Family Members	167
3.4.3 Topological Discussion on the DSBC and DSCC Converters	168
3.4.4 Comparisons among the Six MMCC Family Members	169
3.4.5 Circulating Current	170
3.5 Practical Applications of SSBC Inverters to Medium-Voltage Motor Drives	171
3.6 Hierarchical Control of an SSBC-Based STATCOM	173
3.6.1 Background and Motivation	173
3.6.2 Hierarchical Control	174
3.7 A Downscaled SSBC-Based STATCOM With Phase-Shifted-Carrier PWM	176
3.7.1 System Configuration	177
3.7.2 Control Technique	179
3.7.3 Experimental Waveforms	181
3.8 Circulating Currents in DSCC Converters	183
3.8.1 Circulating Current in a Cycloconverter	184
3.8.2 Circulating Current in a Single-Leg DSCC Inverter	185
3.8.3 Similarity and Difference in Circulating Current	186
3.9 A Downscaled DSCC-Based BTB System	187
3.9.1 Circuit Configuration	187
3.9.2 Operating Performance under Transient States	189
3.10 Practical Applications of DSCC Converters to Grid Connections	192
3.11 Applications of DSCC and TSBC Converters to Motor Drives	193
3.11.1 DSCC-based Motor Drive Systems	193
3.11.2 Experimental Motor Drives Using a DSCC Inverter and a TSBC Converter	195
3.11.3 Comparisons in Start-up Performance when the 50 Hz Induction Motor was Driven	198
3.11.4 Operation of the DSCC-Driven 50 Hz Motor and the TSBC-Driven 38 Hz Motor at the Rated Frequency and Torque	202
3.11.5 Four-Quadrant Operation of the TSBC-driven 38 Hz Motor at No Load Torque	204
3.11.6 Discussion of the Two Motor Drives	204
3.12 Distributed Dynamic Braking of a DSCC-FED Induction Motor Drive	204
3.12.1 Background and Motivation	206
3.12.2 Circuit and System Configurations	206
3.12.3 Experimental Verification	210
3.13 Practical Applications of DSCC Inverters to Medium-Voltage Motor Drives	212
3.14 Future	

Scenarios and Conclusion	213
References	214
Chapter 4	
Multilevel Converters - Control and Operation in Industrial Systems	219
/Jose I. Leon, Sergio Vazquez and Leopoldo G. Franquelo	
4.1 Introduction	219
4.2 Summary of Multilevel Converter Topologies	221
4.3 Control Structure of Multilevel Power Converters	223
4.3.1 The Outer Control Loop (Stage 1)	225
4.3.2 The Inner Control Loop (Stage 2)	225
4.3.3 The Zero-Sequence Injection (Stage 3)	226
4.3.4 The In-phase Balancing Strategy (Stage 3)	227
4.4 Modulation Methods for Multilevel Power Converters (Stage 4)	227
4.4.1 Carrier-Based Modulation Techniques	228
4.4.2 Space-vector Based Modulation Methods	242
4.4.3 Pseudo-Modulation Techniques and Control Methods with Implicit Modulator	243
4.5 Applications of Multilevel Power Converters	245
4.5.1 Grid-connected Multilevel Converters for the Integration of Renewable Energy Sources	245
4.5.2 Power Quality Applications	248
4.5.3 Motor Drive Applications	250
4.5.4 HVDC Transmission Systems	251
4.6 Additional Practical Challenges of Multilevel Converters	257
4.7 Future Perspective of Multilevel Converters and Conclusions	258
References	259
Chapter 5 Flexible Transmission and Resilient Distribution Systems Enabled by Power Electronics	271
/Fang Z. Peng and Jin Wang	
5.1 Introduction	271
5.2 FACTS Configurations in the Smart Grid	279
5.2.1 Shunt Compensation	281
5.2.2 Series Compensation	284
5.2.3 Shunt-Series Configuration	285
5.2.4 Back-to-Back Configuration	286
5.3 RACDS Configurations in the Smart Grid	287
5.3.1 RACDS: Microgrids	287
5.3.2 RACDS: Controllable Distribution Network	289
5.3.3 RACDS: Meshed Distribution Systems	290
5.4 Evolution of FACTS and RACDS	291
5.4.1 Traditional FACTS and RACDS	291
5.4.2 Modern FACTS and RACDS	293
5.4.3 FACTS and RACDS Installations	298
5.5.1 Traditional FACTS Installations	298
5.5.2 Modern FACTS Installations	299
5.5.3 RACDS Installations	301
5.6 Future Perspectives	301
5.6.1 Transformerless Unified Power Flow Controller	301
5.6.2 Compact Dynamic Phase-Angle Regulator	303
5.6.3 Distributed FACTS	303
5.6.4 Power Regulator for Parallel Feeders	305
5.6.5 High Power Density CMIs	307
5.7 Conclusion	309
Acknowledgments	310
References	310
Chapter 6 Renewable Energy Systems with Wind Power	315
/Frede Blaabjerg and Ke Ma	
6.1 Overview of Wind Power Generation and Power Electronics	315
6.2 Technology Challenges and Driving Forces in this Field	318
6.2.1 Low Levelized Cost of Energy (LCOE)	318
6.2.2 Complex Mission Profiles	320
6.2.3 Strict Grid Codes	322
6.2.4 Increasing Reliability Requirements	325
6.3 Wind Turbine Concepts and Power Electronics Converters	326
6.3.1 Wind Turbine Concepts	326
6.3.2 Power Electronics Converters in Wind Power Applications	328
6.4 Control of Wind Turbine Systems	333
6.5 Power Electronics for Multiple Wind Turbines and Wind Farms	336
6.6 Conclusion	340
References	341
Chapter 7 Photovoltaic Energy Systems	347
/Mariusz Malinowski, Jose I. Leon and Haitham Abu-Rub	
7.1 Introduction	347
7.2 Thermal and PV Solar Energy Systems	351
7.3 The Solar Cell	354
7.4 Solar PV System Costs	357
7.4.1 Incentives for More Investments in PV Systems	361
7.5 General Scheme for a Solar PV System	362
7.6 Grid-Connected PV Systems	363
7.6.1 Utility-scale PV Power Plants	364
7.6.2 Residential and Industrial PV Applications	366
7.6.3 Low-power PV Systems	371
7.7 Control of Grid-Connected PV Systems	372
7.8 Stand-Alone PV Systems	374
7.9 Energy Storage Systems for PV Applications	379
7.10 Operational Issues for PV Systems	381
7.11 Conclusions	385

Sommario/riassunto

This book is an advanced approach to power electronics specifically in terms of renewable energy systems and smart grid. The fourteen chapters are updated and extended versions of the invited papers in the Proc. IEEE special issue of November 2017, contributed by a group of invited authors who are international authorities in their field. The application-oriented chapters are tutorial oriented, with technology status review. The book also includes examples of applications and discussions of future perspectives.
