

1. Record Nr.	UNINA9910677886103321
Autore	Organschi Alan
Titolo	Carbon : a field manual for building designers // Alan Organschi, Matti Kuittinen, and Andrew Ruff
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, Inc., , [2022] ©2022
ISBN	1-119-72086-9 1-119-72077-X 1-119-72082-6
Descrizione fisica	1 online resource (272 pages)
Disciplina	620.1/93
Soggetti	Carbon Construction industry Climatic changes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Preface -- Chapter 1 Carbon? -- Our Carbon Challenge -- Building Elements -- King Carbon -- A Global Carbon Budget -- The Carbon Cycle in Building History -- Carbon Flows in Building -- Staunching the Flow -- Time Management in Carbon Mitigation -- Re-balancing the Planet: Agency and Opportunity -- About This Book: An Overview -- Visualizing Carbon Flows -- Chapter 2 Measuring Carbon Flows -- Life Cycle Assessment: What's in It for Building Designers? -- An Opportunity -- Carbon Measurement for Carbon Management -- The Fundamental Concepts -- The Approach -- Life Cycle Boundaries, Scales, and Periods -- Operational and Embodied Impacts -- The Stages of the Building Life Cycle -- Assessment Methods -- Standards -- The Process of Life Cycle Assessment -- Defining the Goal and Scope of Assessment -- Setting the System Boundaries: What to Include? -- Life Cycle Scenarios -- Sensitivity Analysis -- Cut-Off Rules -- The Production Stage -- Materials Make a Difference -- Calculating the Carbon Flows in the Production Phase -- Inventory of Materials -- Data for Material-Related Emissions -- Reducing

the Carbon Footprint in the Production Stage -- The Construction Stage -- From Material Components and Products to the Building System -- Transport -- Construction Method -- The Use Stage -- Embodied and Operational Impacts -- Emissions from the Use of Energy and Water -- Service Life -- Other Emissions (and Potential Removals) During the Use Phase -- End-of-Life Stage -- End-of-Life Scenarios -- Deconstruction -- Transport -- Landfilling and Decomposition -- End-of-Waste -- Closing the Loop -- Results, Interpretation, and Comparison -- Describing the Dominance of Life Cycle Phases -- Sensitivity Analysis -- Comparing Impact Estimates -- Limits of a Life Cycle Approach. The Streamlined Life Cycle Assessment for Buildings -- Chapter 3 Case Studies in Decarbonization -- Notes from the Field -- How Were the Calculations Performed? -- Material Inventories -- Carbon Footprints -- Biogenic Carbon Neutrality of Wood -- Carbonation of Concrete -- Accumulation of Carbon in Plants and Soil -- Mitigation Potential -- Case Study 1 Common Ground High School -- Architectural Objectives (by Gray Organschi Architecture) -- Summary of Total Carbon Emissions, Storages and Circulation Potential -- Common Ground High School: Key Figures -- Materials -- Site and Ground Works -- Foundations and Ground Floor -- Structural Frame -- Façades and External Decks -- Roofs -- Internal Dividers -- Space Surfaces -- Internal Fixtures -- Building System Installations -- Mitigation Potential from Materials and Systems -- Energy-Related Emissions -- Case Study 2: Puukuokka Housing Block -- Puukuokka One Apartment Building -- Architectural Objectives (by OOEPEAA Office for Peripheral Architecture) -- Summary of Total Carbon Emissions, Storages, and Circulation Potential -- Puukuokka One: Key Figures -- Materials -- Site and Ground Works -- Foundations and Ground Floor -- Modular Units -- Hallway -- Façades -- Roofs -- Building Service Installations -- Mitigation Potential from Materials and Systems -- Energy -- Comparison of the Case Studies -- What Causes the Differences? -- Building Typology -- Physical Features and Structural Solutions -- Location and Weather -- Regulations -- Comparison of the Emissions -- Chapter 4 De-carbonizing Design -- A Context of Externalities: Preconditions of the Decarbonized Design Process -- Decarbonization: Challenges and Opportunities -- Points of Inflection and Influence in the Building Life Cycle -- The Decarbonized Design Process -- A Note of Caution: Benefits and Pitfalls of Checklist Thinking. A Low-Carbon Concord -- Some Basic Rules of Engagement -- Phases of Decarbonized Building Design -- The Pre-Design or Project Preparation Phase: Laying the Groundwork for Decarbonized Building Design -- Selecting a Low-Carbon Site -- Building Context -- Programming a Low-Carbon Building -- Anticipating the Lifespan of a Building -- The Conceptual or Schematic Design Phase -- Right-Sizing the Building -- Low-Carbon Siting -- Shape Matters -- Volumetric Efficiency -- Volumetric Simplicity -- Optimizing Daylight -- Operational Energy Consumption (and Generation) -- Tectonics and Materiality -- Inspiring and Promoting Good Behavior -- The Design Development Phase -- Decarbonizing Building Material -- Decarbonizing the Production Stage: Material Priorities -- Material Classes and Their Carbon Consequences -- The Decarbonized Building Assembly -- Decarbonizing the Use Stage: Energy Consumption, Airtightness, and Thermal Performance -- Detailing for Disassembly in the Building's End-of-Life Stage -- The Later Design Phases: Contract Documentation, Bidding and Negotiation, and Construction Administration -- What Happens After Construction? (One More Design Phase to Consider) -- Principles of Decarbonized Design -- 1. Simplify

-- 2. Reduce Weight -- 3. Minimize Disturbance -- 4. Optimize Ecosystem Services -- 5. Reuse -- 6. Design for Durability and Then Reversibility -- 7. Keep Track of Time and Distance -- 8. Share -- 9. Store Carbon -- 10. Decouple -- Understanding Design Agency: Shifting Roles and Responsibilities -- Chapter 5 Re-Forming the Anthropocene -- Beyond Sustainable -- Making More than Measurements -- Thinking Outside the Building's Life Cycle -- Making a Carbon Handprint -- Re-forming the Anthropocene -- Decoupling -- Simplification -- A New Role for Architecture -- A New Role for Design and Building Education -- Inspiration and Influence. The Anthropocene Re-formed -- Acknowledgments -- Glossary -- References -- Index -- EULA.

Sommario/riassunto

"The rapid increase in global carbon emissions over the past century has created a climate crisis that threatens to disrupt the world's cultural, economic, and social fabric. The building sector is responsible for well over half of the world's extraction and consumption of carbon-based material and hydrocarbon energy. If the current design and construction approach remains unchecked, and as the world's population growth continues to accelerate, the building sector's demand for raw material and energy for new construction will continue to exacerbate the atmospheric greenhouse gas concentrations."--
