Sommario/riassunto

This book contains a selection of papers from the 13th International Conference on Engineering, Project, and Production Management (EPPM) held in Auckland, New Zealand from 29 November to 1 December 2023. The conference was organized by the School of Built Environment, Massey University in collaboration with the EPPM Association. The book comprises of quality-assured theoretical discussions, data analysis, case studies, and industry practices, presented by global researchers and practitioners. The conference theme was “Creating capacity and capability: re-energizing supply chain for sustainable management of projects and productions in engineering,” and this volume focuses on papers related to engineering management, innovation, and sustainability. The papers are comprehensive, multidisciplinary, and advanced, and will be of interest to researchers and practitioners from various industries seeking the latest updates on the fields of engineering, project, and production management.

Sommario/riassunto	This volume represents a uniquely thorough investigation of trade and financial policy as it impacts upon Third World development. A broad

range of international case studies (including Indonesia, Uruguay and Tunisia) offer a wealth of empirical material and statistical information. Thematic discussion chapters build on these case studies, offering important analysis of topics such as trade specialization and industrial change.
