

1. Record Nr.	UNINA9910682562003321
Titolo	Optimisation in Synchronodal Logistics : From Theory to Practice // edited by Frank Phillipson
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2023
ISBN	9783031156557 9783031156540
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (297 pages)
Collana	Lecture Notes in Operations Research, , 2731-0418
Disciplina	780
Soggetti	Operations research Business logistics Management science Mathematical optimization Stochastic processes Operations Research and Decision Theory Logistics Operations Research, Management Science Optimization Discrete Optimization Stochastic Processes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- References -- Acknowledgements -- Contents -- Acronyms -- Part I Introduction -- 1 Categorisations of Optimisation Problems in Synchronodal Logistics -- Introduction -- Context of Synchronodal Logistics -- Literature -- Optimisation Framework -- Changing Position in the Framework -- Complexity and Self-Organisation -- Uncertainty and Scope of Optimisation -- Conclusion -- References -- 2 Framework of Synchronodal Transportation Problems -- Introduction -- Literature -- Framework Identifiers and Elements -- Identifiers -- Elements -- Notation -- Six-Field Notation -- Two-Column Notation -- On the Two Notations -- Examples --

Solution Method Mapping -- Relationship to VRP Terminology -- Discussion -- References -- Part II Solving MCMCF Problems -- 3 Deterministic Container-to-Mode Assignment -- Introduction -- Modelling the Problem as a MCMC Flow Problem on a Space-Time Network -- Space-Time Networks -- Minimum-Cost Multi-Commodity Flow -- Allowing Lateness with Virtual Sinks -- Solving to Optimality -- Infinite Resource Models and the Corresponding Graph Reductions -- Double Matrix Infinite Resources -- Other Or No Infinite Resources -- Numerical Results -- Discussion -- Added Value -- Conclusion -- References -- 4 Stochastic Container-to-Mode Assignment -- Introduction -- Concepts and Definitions -- Transit Ideas and Transit Instances -- Request Ideas and Request Instances -- Omnifutures -- Finite Window Methods and Rolling Window Methods -- Locked Futures and Future Trees -- Demifutures -- Solving to Optimality -- Two-Stage Stochastic Programming -- Multistage Stochastic Programming: An Illustrative Example -- Why Multistage Stochastic Programming Is Not Used -- Markov Decision Processes -- Single Future Iteration Heuristics -- Expected Future Iteration -- Partially Pessimistic Future Iteration -- Numerical Results. Discussion -- Added Value -- Conclusion -- References -- 5 Deterministic Operational Freight Planning -- Introduction -- Notation of Variables and Parameters -- Problem Features -- A Note on Labour Conditions -- Solving to Optimality -- ILP Formulation -- Speed-up from Additional Constraints -- Greedy Gain Heuristic -- Compatibility Clustering Heuristic -- Used Metrics -- Description of Algorithm -- Numerical Results -- Discussion -- Added Value -- Conclusion -- References -- 6 Alternative Performance Indicators for Optimising Container Assignment in a Synchromodal Transportation Network -- Introduction -- Attributes -- Robustness -- Flexibility -- Definitions -- Customer Satisfaction -- Conclusions -- References -- 7 Decision Making in a Dynamic Transportation Network: A Multi-Objective Approach -- Introduction -- Multi-Objective Analysis -- Multi-Objective Approach -- Proposed Approach -- Example -- Conclusions and Future Work -- Reference -- 8 Reduction of Variables for Solving Logistic Flow Problems -- Introduction -- Multi-Commodity Network Design Problem -- Variable Reductions -- Commodity Reductions -- Vehicle Reductions -- Arc Reductions -- Location Reductions -- Time Reductions -- Results -- Conclusion -- References -- 9 Cutting Planes for Solving Logistic Flow Problems -- Introduction -- Cutting Planes -- General Cuts -- Symmetry Breaking Cut -- Arc Residual Capacity Cut -- Cutset Cut -- Strong Cut -- Results and Conclusions -- References -- Part III Synchromodal Logistics as Selfish Systems -- 10 Optimising Routing in an Agent-Centric Synchromodal Network with Shared Information -- Introduction -- Literature Review -- Models -- Assumptions -- Description of Simulation -- Public Information Models -- Model 1: Minimum-Cost Routing Without Rerouting -- Model 2: Minimum-Cost Routing with Rerouting -- Full Information Model. Model 3: Full Information, User Equilibrium Routing -- Results -- Conclusions -- References -- 11 User Equilibrium in a Transportation Space-Time Network -- Introduction -- Literature Review -- User Equilibrium in STN -- Numerical Examples -- Conclusions -- References -- 12 Fair User Equilibrium in a Transportation Space-Time Network -- Introduction -- Fair User Equilibrium in STN -- Finding Connected Components in STN -- Tolls on Orders -- Finding a User Equilibrium -- Existence of Solutions -- Path Tolls Based on Order Fairness -- Finding a User Equilibrium -- Existence of Solutions -- Conclusions and Future Research -- References -- Part IV Applications -- 13 Simulation Approach for Container Assignment under Uncertainty

-- Introduction -- Problem Description -- Simulation Approach -- Start of the Algorithm -- Decision Space -- Trivial Decisions -- Decision $(t_a, TRot)$ to $(t_a + 1, TRot)$ -- Decision $(t_a, Origin)$ to $(t_a + 7, TRot)$ -- Remaining Decisions -- Solving the ILP -- Results -- Design of Experiments -- Benchmark Solution Methods -- Numerical Results -- Conclusions and Further Research -- References -- 14 Optimising and Recognising 2-Stage Delivery Chains with Time Windows -- Introduction -- Optimisation -- Problem Description -- First Stage -- Fixed Penalty -- Penalty as Function of Delay -- Penalty is Random Variable, Independent of X -- Second Stage -- Second Time Slot Without Penalty in the First Time Slot -- Propagation of Penalty: Second Time Slot with Penalty -- Case -- Recognising Time Windows in Data -- Analysis -- Limitations -- Conclusions -- References -- 15 Two-Step Approach for the Multi-Objective Container Assignment Problem with Barge Scheduling -- Introduction -- Schedule Construction -- Methodology -- Illustrative Example -- Container Assignment -- Conclusion -- References.

16 A Robust Optimisation Approach to Synchronodal Container Transportation -- Introduction -- Use Case -- Practical Setting -- Base Instance -- Deterministic Problem Formulation -- Deterministic Model -- Additional Remarks -- Robust Problem Formulation -- Robust Optimisation Paradigm -- The Robust Counterpart -- Adjustable Robust Optimisation -- Robust Optimisation for Mixed Integer Programs -- Robust Model -- Computational Results -- Instance Generation -- Results of Deterministic Model -- Results of Robust Model -- High Lateness Penalties -- Low Lateness Penalties -- Discussion -- References -- Index.

Sommario/riassunto

This book introduces readers to the latest advances in synchronodal logistics and presents a framework for classifying various optimisation problems in this field. In turn, it explores how the framework can be used to solve a broad range of problems, such as those with and without a central decision-maker, those with and without full information, deterministic problems, problems involving uncertainty, and the optimisation of a full network design problem. It covers a variety of essential theoretical constructs, such as discrete optimisation, robust optimisation, optimisation under uncertainty, multi-objective optimisation and agent-based equilibrium models. Moreover, it includes practical elaborated use cases to deepen readers' understanding. The book offers a good overview of the field of synchronodal optimisation problems for researchers and practitioners alike, together with practical modelling and problem-solving methods.
