

1. Record Nr.	UNINA9910134010303321
Autore	Baldi Bernardino <1553-1617>
Titolo	In mechanica Aristotelis problemata exercitationes
Pubbl/distr/stampa	Edition Open Access, 2011 [Place of publication not identified], : epubli GmbH, 2011
Descrizione fisica	1 online resource (273 p.)
Collana	Sources 4 (Italian version of Sources 3): Max Planck Research Library for the History and Development of Knowledge
Soggetti	Engineering & Applied Sciences Applied Mathematics
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	<p>_In mechanica Aristotelis problemata exercitationes_, scritte da Bernardino Baldi, vengono ristampate – provviste d'introduzione e commento – come quarto volume della collana _Sources_ della _Max Planck Research Library for the History and Development of Knowledge_, la versione Italiana di _Sources 3_. Il volume è disponibile in internet senza limitazioni d'accesso anche come pubblicazione elettronica _open-access_ all'indirizzo www.edition-open-access.de. Il testo venne pubblicato nel 1621, quattro anni dopo la morte dell' autore. Questo libro appartiene alla lunga tradizione rinascimentale concernente lo studio dei _Problemi Meccanici_ pseudo-aristotelici. A differenza della maggior parte delle altre opere scritte durante il XVI secolo, tuttavia, il testo di Baldi esprime una posizione critica nei confronti dell'approccio teorico presente nelle meccaniche pseudo-aristoteliche. Il testo delle _Exercitationes_ mostra una sistematica applicazione dei principi archimedei alla spiegazione delle questioni discusse nei _Problemi Meccanici_ e, dunque, illustra chiaramente la struttura a forma di patchwork della meccanica preclassica. Il testo, inoltre, presenta lunghe digressioni che ampliano considerevolmente i confini della meccanica. The _Exercitationes_ were first published in 1621, four years after the death of the author. The work belongs to the</p>

long tradition of studies on the pseudo-Aristotelian *_Mechanical Problems_* developed during the Renaissance but, unlike most other works written during the sixteenth century, it takes a critical position against the theoretical approach of the pseudo-Aristotelian text. The *_Exercitationes_* display a systematic application of Archimedean principles to the explanation of the questions discussed in *_Mechanical Problems_* illustrating the patchwork character of preclassical mechanics. Moreover, Baldi's work presents lengthy digressions that considerably widen the boundaries of mechanics.

Nota di contenuto	Chapter 1. Introduction by the editors -- Chapter 2. The market reaction to climate risk: evidence from the European banking industry -- Chapter 3. Dissecting the European ESG premium vs the US: is it all

about non-financial reporting? -- Chapter 4. Loan origination and monitoring guidelines: how ESG indicators affect firms' probability of default? -- Chapter 5. Using E from ESG in systemic risk measurement -- Chapter 6. Corruption disclosure in banking: insights from the literature -- Chapter 7. Financial competence and the role of non-cognitive factors -- Chapter 8. Does financial literacy progress over time? An analysis of three surveys in Italy -- Chapter 9. An interdisciplinary approach to economic texts: the "Considerazioni Finali" by the Governor of the Bank of Italy as a case study -- Chapter 10. Drivers of shareholder value creation in M&A: event study in the European banking sector in the post-financial crisis era -- Chapter 11. Market Reactions to Central Bank Governor Changes: Evidence from Istanbul Stock Exchange.

Sommario/riassunto

This book discusses the transformation of the banking industry, particularly after a number of recent shocks: 2008 financial crisis, 2012 Euro-sovereign crisis, the pandemic COVID-19 crisis, the technological revolution, and reputational problems in banking due to climate risk and ESG (Environmental, Social and Governance) metrics. The book emphasizes two post-pandemic issues: the role of financial education and inclusive finance, and responsible banking and ESG priorities. Individual chapters analyse how the pandemic shed new light on social and governance responsibilities: Major issues include the importance and efficiency of financial education, and the impact of ESG programs on firms' value, banks' probability of default, bank business models and reputation risk. The book also addresses investors' behaviour and the factors which may bias financial disclosure and reporting. By addressing whether the post-2008 crisis bank restructuring has effectively created a resilient and sustainable banking system – mostly from the European market's perspective – the book will be of interest to researchers, academics, policy makers, and professionals of banking and financial institutions. Paul Wachtel is Professor Emeritus of Economics at the Stern School of Business, New York University. His research has been published in numerous journals, focusing on monetary policy, central banking and financial sector development. He was the co-editor of *Comparative Economic Studies* and is an Associate Editor of the *Journal of Banking and Finance*. Giovanni Ferri is Professor of Economics at the Department of Law, Economics, Political Sciences and Modern Languages at LUMSA University. He also co-founded and chairs the master in management of SDGs and the Center for Relationship Banking & Economics, which fosters research for a better understanding of relational goods to promote society's wellbeing. Ewa Miklaszewska is Professor of Economics at Cracow University of Economics, Poland, where she chairs the Department of Banking and Global Financial System, alongside being a guest lecturer at the Institute of Economics, Finance and Management of the Jagiellonian University. She is also a committee member of the European Association of University Teachers in Banking and Finance (The Wolpertinger Club).
