

1. Record Nr.	UNINA9910684570503321
Autore	Diver Laurence E.
Titolo	Digisprudence : code as law rebooted // Laurence E. Diver
Pubbl/distr/stampa	Edinburgh : , : Edinburgh University Press, , 2021
Descrizione fisica	1 online resource (xii, 264 pages) : illustrations (some color)
Collana	Future law
Disciplina	343.09944
Soggetti	Computer networks - Law and legislation Computer programming
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"Laurence Diver combines insight from legal theory, philosophy of technology and programming practice to develop a new theoretical and practical approach to the design of legitimate software. The book critically engages with the rule(s) of code, arguing that, like laws, these should exhibit certain formal characteristics if they are to be acceptable in a democracy. The resulting digisprudential affordances translate ideas of legitimacy from legal philosophy into the world of code design, to be realised through the 'constitutional' role played by programming languages, integrated development environments (IDEs), and agile development practice. The text interweaves theory and practice throughout, including many insights into real-world technologies, as well as case studies on blockchain applications and the Internet of Things (IoT)"--
