

1. Record Nr.	UNINA9910686761803321
Titolo	Protein interactions : the molecular basis of interactomics / / edited by Volkhard Helms and Olga V. Kalinina
Pubbl/distr/stampa	Weinheim, Germany : , : Wiley-VCH, , [2023] ©2023
ISBN	3-527-83050-2 3-527-83052-9
Descrizione fisica	1 online resource (490 pages)
Disciplina	572.64
Soggetti	Protein-protein interactions Molecular biology Cell receptors
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Table of Contents -- Title Page -- Copyright -- Preface -- 1 Protein Structure and Conformational Dynamics -- 1.1 Structural and Hierarchical Aspects -- 1.2 Conformational Dynamics -- 1.3 From Structure to Function -- 1.4 Summary -- References -- 2 Protein-Protein-Binding Interfaces -- 2.1 Definition and Properties of Protein-Protein Interfaces -- 2.2 Growing Number of Known Protein-Protein Interface Structures -- 2.3 Surface Areas of Protein-Protein Interfaces -- 2.4 Gap Volume of Protein-Protein Interfaces -- 2.5 Amino Acid Composition of Interfaces -- 2.6 Secondary Structure of Interfaces -- 2.7 Protein-Protein Binding Energy -- 2.8 Interfaces of Homo and HeteroDimeric Complexes -- 2.9 Interfaces of Nonobligate and Obligate Complexes -- 2.10 Interfaces of Transient and Permanent Complexes -- 2.11 Biological vs. Crystal Interfaces -- 2.12 Type I, Type II, and Type III Interfaces -- 2.13 Conserved Residues and Hot Spots in Interfaces -- 2.14 Conclusion and Future Implications -- References -- 3 Correlated Coevolving Mutations at Protein-Protein Interfaces -- 3.1 Introduction -- 3.2 A Short Introduction into Biomolecular Modeling -- 3.3 Statistical Inference of Coevolution -- 3.4 Solving the Inverse Potts Model -- 3.5 Contact Guided Protein and RNA Structure Prediction --

3.6 InterMonomer Interaction and Signaling -- 3.7 Summary --
 References -- Note -- 4 Computational Protein-Protein Docking -- 4.1
 Introduction -- 4.2 Rigid Body Protein-Protein Docking Approaches --
 4.3 Accounting for Conformational Changes during Docking -- 4.4
 Integration of Bioinformatics and Experimental Data for Protein-Protein
 Docking -- 4.5 TemplateBased Protein-Protein Docking -- 4.6 Flexible
 Refinement of Docked Complexes -- 4.7 Scoring of Docked Complexes
 -- 4.8 Conclusions and Future Developments -- Acknowledgments --
 References.
 5 Identification of Putative Protein Complexes in Protein-Protein
 Interaction Networks -- 5.1 Protein-Protein Interaction Networks -- 5.2
 Integration of Various PPI Resources in Public Data Repositories -- 5.3
 Protein-Protein Interaction Networks of Model Organisms -- 5.4
 Algorithms to Identify Protein Complexes in PPI Networks -- 5.5
 Summary -- References -- 6 Structure, Composition, and Modeling of
 Protein Complexes -- 6.1 Protein Complex Structure -- 6.2 Methods
 for Automated Assignment of Biological Assemblies -- 6.3
 Computational Approaches to Predicting 3D Structure of Protein
 Complexes -- 6.4 Conclusion and Outlook -- Acknowledgments --
 References -- Notes -- 7 Live-Cell Structural Biology to Solve Molecular
 Mechanisms: Structural Dynamics in the Exocyst Function -- 7.1
 Introduction -- 7.2 Structural Biology Using Light Microscopy Methods
 -- 7.3 Hybrid Methods: Integrative Structural Biology -- 7.4 Integrative
 Modeling: The Case of the Exocyst Complex -- 7.5 Comparing the In
 Situ Architecture of the Exocyst with a HighResolution CryoEM Model
 -- 7.6 Discussion and Future Perspectives -- Acknowledgements --
 References -- 8 Kinetics and Thermodynamics of Protein-Protein
 Encounter -- 8.1 Introduction -- 8.2 Thermodynamic Ensembles and
 Free Energy -- 8.3 Overview of Computational Methods to Determine
 Binding Free Energies -- References -- 9 Markov State Models of
 Protein-Protein Encounters -- 9.1 Introduction -- 9.2 Molecular
 Dynamics and Markov State Models -- 9.3 Strategies for MSM
 Estimation, Validation, and Analysis -- 9.4 The Connection to
 Experiments -- 9.5 Protein-Protein and Protein-Peptide Encounters --
 9.6 Emerging Technologies -- Acknowledgments -- References -- 10
 Transcription Factor - DNA Complexes -- 10.1 Introduction -- 10.2
 Principles of Sequence Recognition -- 10.3 Dimerization of Eukaryotic
 TFs.
 10.4 Detection of Epigenetic Modifications -- 10.5 Detection of DNA
 Curvature/Bending -- 10.6 Modifications of Transcription Factors --
 10.7 Transcription Factor Binding Sites -- 10.8 Experimental Detection
 of TFBS -- 10.9 PositionSpecific Scoring Matrices -- 10.10 Molecular
 Modeling of TF-DNA Complexes -- 10.11 CisRegulatory Modules --
 10.12 Relating Gene Expression to Binding of Transcription Factors --
 10.13 Summary -- References -- 11 The Chromatin Interaction System
 -- 11.1 Chromatin Is a Special Interaction Platform -- 11.2 Interaction
 of Proteins with Histone Posttranslational Modifications -- 11.3
 Interaction of Proteins with Modified Nucleic Acids -- 11.4 UHRF1 as an
 Example of a Multidomain Reader/Writer Protein of Histone and DNA
 Modifications -- 11.5 Histone Chaperones and Chromatin Remodeling
 Complexes -- 11.6 Challenges in Chromatin Interactomics --
 References -- 12 RNA-Protein Interactomics -- 12.1 Introduction --
 12.2 Interactions of Proteins with mRNA and ncRNA -- 12.3 The Basic
 Toolbox -- 12.4 RNA-Protein Interactomics -- 12.5 Outlook -- Notes
 -- References -- 13 Interaction Between Proteins and Biological
 Membranes -- 13.1 Introduction -- 13.2 The Plasma Membrane:
 Overview of Its Structure, Composition, and Function -- 13.3 Lipid
 Based and ProteinBased Sorting of Plasma Membrane Components --

13.4 Interaction of Peripheral Membrane Proteins with Membrane Lipids
-- 13.5 Interactions and Conformations of Transmembrane Proteins in Lipid Membranes -- 13.6 Summary -- Acknowledgment -- References
-- 14 Interactions of Proteins with Small Molecules, Allosteric Effects --
14.1 Introduction -- 14.2 Modes of Binding to Proteins -- 14.3 Types of Interaction Between Protein and Ligand -- 14.4 Modeling Intermolecular Interactions by Force Fields and Docking Simulations -- 14.5 Entropic Aspects.
14.6 Allosteric Effects: Conformational Changes Upon Ligand Binding
-- 14.7 Aspects of Ligand Design Beyond Protein-Ligand Interactions
-- 14.8 Conclusions -- References -- 15 Effects of Mutations in Proteins on Their Interactions -- 15.1 Introduction -- 15.2 Structural Annotation of Mutations in Proteins -- 15.3 Methods for Predicting Effect of Protein Mutations -- 15.4 Conclusion -- Acknowledgments -- References -- 16 Not Quite the Same: How Alternative Splicing Affects Protein Interactions -- 16.1 Introduction -- 16.2 Effects of Alternative Splicing on Individual Proteins -- 16.3 Effects of Alternative Splicing on Protein-Protein Interaction Networks -- 16.4 Conclusion and Future Work -- References -- Notes -- 17 Phosphorylation-Based Molecular Switches -- 17.1 Introduction -- 17.2 Reversible Protein Phosphorylation in Cellular Signaling: Writers, Readers, and Erasers -- 17.3 Protein Kinases as Molecular Switches and as Components of Signaling Cascades -- 17.4 Mechanisms of Phosphorylation Specificity: the Importance of Short Linear Motifs -- 17.5 Examples of Phospho SwitchBased Biological Regulation -- 17.6 Conclusion -- Acknowledgments -- References -- 18 Summary and Outlook -- 18.1 Technical State of the Art -- 18.2 Role of Machine Learning -- 18.3 Challenges -- 18.4 What Picture(s) May Evolve? -- References -- Index -- End User License Agreement.
