Antimicrobial therapy is a key factor in our success against pathogens poised to ravage at risk or infected individuals. However, we are currently at a watershed point as we face a growing crisis of antibiotic resistance among diverse pathogens. One area of intense interest is the impact of the application of antibiotics for uses other than the treatment of patients and the association with such utilization with emerging drug resistance. This Research Topic "Low dose antibiotics: current status and outlook for the future" in *Frontiers in Microbiology: Antimicrobials, Resistance and Chemotherapy* details various aspects of the wide ranging effects of antimicrobial therapy from areas such as the regulation of host responses to modulation of bacterial virulence factors to acquisition of antibiotic resistance genes.

**Sommario/riassunto**

Justice in the City argues, based on the rabbinic textual tradition, especially the Babylonian Talmud, and utilizing French Jewish philosopher Emmanuel Levinas' framework of interpersonal ethics, that a just city should be a community of obligation. That is, in a community thus conceived, the privilege of citizenship is the assumption of the

obligations of the city towards Others who are not always in view—workers, the poor, the homeless. These Others form a constitutive part of the city. The second part of the book is a close analysis of homelessness, labor, and restorative justice from within the theory that was developed. This title will be useful for scholars and students in Jewish studies, especially rabbinic literature and Jewish thought, but also for those interested in contemporary urban issues.
