Sommario/riassunto

Gender equality has been a major educational theme for the past two decades and has become interwoven with other policy themes, including those of marketisation and managerialism. Contributors to this strong collection are key researchers in their fields and seek to address the following questions:
* What patterns are discernible in the educational attainment of girls and boys over the past two decades?
* To what extent are changes attributable to gender equality policies?
* What form have gender equality policies taken in different parts of the UK?
* What has been the impact of Europe

Sommario/riassunto

Over the last few years, polyphenol has received a great deal of attention due to their potential beneficial effects on human health. Widely contained in foods commonly consumed in all populations worldwide, polyphenols represent an attractive explanation of the

beneficial effects, not only of fruits and vegetables, characteristic components of healthy dietary patterns, but also of other plant-derived foods, such as tea, coffee, and cocoa, which only recently have been exploited as being beneficial for humans. In addition to the numerous biological properties, polyphenols have been indicated as being responsible for a decreased risk of metabolic disorders, cardiovascular disease, and certain cancers. The book addresses original research and reviews of literature concerning polyphenol-rich foods and human health.
