                      -- References -- About the Author.

   Sommario/riassunto "In this lively and approachable volume based on his popular blog
                      series, Martin Weller demonstrates a rich history of innovation and
                      effective implementation of ed tech across higher education. From
                      Bulletin Board Systems to blockchain, Weller follows the trajectory of
                      education by focusing each chapter on a technology, theory, or concept

that has influenced each year since 1994. Calling for both caution and enthusiasm, Weller advocates for a critical and research-based approach to new technologies, particularly in light of disinformation, the impact of social media on politics, and data surveillance trends. A concise and necessary retrospective, this book will be valuable to educators, ed tech practitioners, and higher education administrators, as well as students."-- Provided by publisher.
