1. Record Nr. UNINA9910688448303321 Autore Schaffner Urs Titolo Review of Invertebrate Biological Control Agents Introduced into Europe UK,: CABI, 2016 Pubbl/distr/stampa Descrizione fisica 1 electronic resource (194 p.) Pest control Soggetti Insects (entomology) Agricultural science Lingua di pubblicazione Inglese Materiale a stampa **Formato** Livello bibliografico Monografia Sommario/riassunto This review provides an overview of all documented releases of exotic (non-European) invertebrate biological control agents (IBCAs) into the environment in Europe and summarizes key information on the target species as well as on the biological control agent released. It is an update of A Review of Biological Control in Western and Southern Europe edited by Greathead (1976) and covers the period from 1897, when the beetle Rodolia cardinalis was introduced into Portugal against the invasive cottony cushion scale, Icerva purchasi, until the end of 2009. This review is based largely on the BIOCAT database (Greathead and Greathead 1992), which contains records of the introduction of insect natural enemies, namely parasitoids and predators, for the control of insect pests worldwide. This review may not provide the complete list of BC agents introduced into Europe. Nevertheless, the

into the environment in Europe.

report includes a vast majority of the introductions, and hence provides a representative picture of the history of releases of exotic BC agents
