1. Record Nr. UNINA9910688474803321 Dynamical Systems Theory / / edited by Jan Awrejcewicz Titolo London, England:,: IntechOpen,, 2020 Pubbl/distr/stampa Descrizione fisica 1 online resource (184 pages) Disciplina 621.816 Soggetti Machinery - Reliability Machinery - Maintenance and repair Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia The quest to ensure perfect dynamical properties and the control of Sommario/riassunto different systems is currently the goal of numerous research all over the world. The aim of this book is to provide the reader with a selection of methods in the field of mathematical modeling, simulation, and control of different dynamical systems. The chapters in this book focus on recent developments and current perspectives in this important and interesting area of mechanical engineering. We hope that readers will be attracted by the topics covered in the content, which are aimed at increasing their academic knowledge with competences related to selected new mathematical theoretical approaches and original

numerical tools related to a few problems in dynamical systems theory.
