Sommario/riassunto	In 2001, NASA began the space launch initiative to develop a new generation of space transportation vehicles. Before requirements for a second-generation reusable launch vehicle can be defined, NASA must complete reassessing its overall space transportation plans and the future of the international space station, as well as decide how the Department of Defense will participate in development. Until requirements are finalized, NASA cannot implement management controls necessary to predict program costs and minimize risks with the initial \$4.8 billion investment.

Sommario/riassunto	In the past 30 years, the study of bilingualism processing has been conducted independently by two fields, psycholinguistics and sociolinguistics. This volume merges these two fields, addressing one of the tough problems dividing researchers in bilingualism, conceptually as well as methodologically. Joel Walters proposes a new approach to bilingualism processing--the Sociopragmatic-Psycholinguistic (SPPL) Model--which presents language as a social phenomenon. The author accomplishes this by identifying and organizing evidence from a wide range of linguistic disciplines, merging sociopragmatics
