Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Finds that there are vulnerabilities in the security procedures of some air carriers and freight forwarders, and in possible tampering with freight between the time cargo leaves a shipper to the point when it is loaded onto an aircraft. Points out that weaknesses in the air cargo system can create security risks. Recommends that the Transportation Security Administration develop a comprehensive plan for air cargo security that incorporates a risk management approach, deadlines, and performance targets.
