Statistics. United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Periodico
Note generali	Subtitle includes date of report coverage. "Data are presented for diagnoses of HIV infection and AIDS reported to CDC ..." "Publication of this report would not have been possible without the contributions of the state and territorial health departments and the HIV surveillance programs that provided surveillance data to CDC."
Sommario/riassunto	"The annual HIV Surveillance Report provides an overview on the current epidemiology of HIV disease in the United States and dependent

areas. CDC funds state and territorial health departments to collect surveillance data on persons diagnosed with HIV infection; all personal identifiers are removed from these data before being transmitted to CDC via a secure data network. Data are analyzed by CDC and then displayed by age, race, sex, transmission category, and jurisdiction (where appropriate). Prior to the 2008 reporting year, the report was referred to as the HIV/AIDS Surveillance Report. The report is published annually in late summer or early fall."
