Sommario/riassunto	This compelling book destroys the derogatory images of single mothers that too often prevail in the media and in politics by creating a rich, moving, multidimensional picture of who these women really are. Ruth Sidel interviewed mothers from diverse races, ethnicities, religions, and social classes who became single through divorce, separation, widowhood, or who never married; none had planned to raise children on their own. Weaving together these women's voices with an accessible, cutting-edge sociological and political analysis of

single motherhood today, *Unsung Heroines* introduces a resilient, resourceful, and courageous population of women committed to their families, holding fast to quintessential American values, and creating positive new lives for themselves and their children. What emerges from this penetrating study is a clear message about what all families—two-parent as well as single parent—must have to succeed: decent jobs at a living wage, comprehensive health care, and preschool and after-school care. In a final chapter, Sidel gives a broad political-economic analysis that provides historical background on the way American social policy has evolved and compares the situation in the U.S. to the social policies and ideologies of other countries.

Sommario/riassunto

Social anxiety (SA) is a common and incapacitating disorder that has been associated with seriously impaired career, academic, and general

social functioning. Regarding epidemiological data, SA has a lifetime prevalence of 12.1% and is the fourth most common psychopathological disorder (Kessler et al., 2005). At a fundamental point of view, the most prominent cognitive models of SA posit that biased cognitions contribute to the development and maintenance of the disorder (e.g., Clark & Wells, 1995; Rapee & Heimberg, 1997). Over the last decades, a large body of research has provided evidence that individuals suffering from SA exhibit such biased cognitions at the level of visual attention, memory of social encounters, interpretation of social events, and in judgment of social cues. Such biased cognitions in SA has been studied in different ways within cognitive psychology, behavioral psychology, clinical psychology, and cognitive neuroscience over the last few decades, yet, integrative approaches for channeling all information into a unified account of biased cognitions in SA has not been presented so far. The present Research Topic aims to bring together these different ways, and to highlight findings and methods which can unify research across these areas. In particular, this Research Topic aims to advance the current theoretical models of SA and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines.
