| Livello bibliografico | Monografia |
| Note generali | Title from PDF title screen (viewed on Mar. 6, 2007). "The interim results presented herein are from an ongoing study and may be used for discussion or mediation concerning water use in the Apalachicola-Chattahoochee-Flint River basin. The final report for this project is expected to be available in the fall of 2007. In this USGS Open-File Report release of interim results, a comparison of the present (2004-06) composition of floodplain forests to the composition of forests surveyed in the late 1970s documents some of the changes that have occurred on the Apalachicola River floodplain". |
