Note generali	Title from title screen (viewed on Dec. 8, 2008). "August 2007." "FA-312."
Nota di bibliografia	Includes bibliographical references (page 70) and index.
Sommario/riassunto	Cooking fires are the most common type of fire experienced by U.S. households and the leading cause of home fire injuries. The report reflects the results of research conducted by the U.S. Fire Administration and the National Fire Protection Association the types of behaviors and sequences of events that lead to cooking fires and develops recommendations for behavioral mitigation strategies that will reduce such fires and their resultant injuries and fatalities. Appendix C includes grilling safety messages from the American Burn Association's 2002 Burn Awareness Week.
