| Sommario/riassunto | This report examines socioeconomic changes that took place between 1990 and 2003 on and around lands managed by the Klamath National Forest in California to assess the effects of the Northwest Forest Plan (the Plan) on rural economies and communities there. Three case communities were studied: Scott Valley, Butte Valley, and Mid-Klamath. The report characterizes the region and its history, discusses management changes on the forest under the Plan and how they were perceived, describes socioeconomic change in the communities and how they were linked to the Plan, and evaluates how well Plan socioeconomic goals were met by the Klamath National Forest. |
