Note generali	Title from title screen (viewed on Dec. 13, 2007). "November 2007." "Originally presented at the Strategic Studies Institute's 2007 annual Strategy Conference" -- Foreword.
Nota di bibliografia	Includes bibliographical references (pages 55-56).
Nota di contenuto	The security challenges in Northeast Asia: a Chinese view / Chu Shulong -- Security challenges to the United States in Northeast Asia: looking beyond the transformation of the Six-Party Talks / Gilbert Rozman.
Sommario/riassunto	A new framework for Northeast Asian security must cope with the legacy of six decades of frequent changes in the region's great power relations. In order to realize the goals of the Joint Agreement in the Six-Party Talks, multilateralism is becoming more important. U.S. leadership faces challenges from: the Sino-U.S. rivalry that is better managed because of cooperation over North Korea; the Russo-U.S. rivalry that has intensified, although there is potential to stabilize it in this region; Sino-Russian partnership, which has drawn closer in response to the nuclear crisis but could be tested by progress that would reveal conflicting national interests; North Korean belligerence, which is unlikely to end even if the nuclear crisis is brought under

control; South Korean balancing, which would remain even under a conservative president; and Sino-Japanese rivalry, which is somewhat under control in 2007 but remains the main barrier to regionalism. A U. S. regional strategy is needed that addresses all of these challenges in the context of the Six-Party Talks.

Nota di contenuto	Foreword / by Stevan Harrell -- The Tibetan medical house -- Medicine and religion in the politics and public health of the Tibetan state -- Narrative, time, and reform -- The medico-cultural revolution -- Reviving Tibetan medicine, integrating biomedicine -- Looking at illness -- Glossary.
Sommario/riassunto	Une source inconnue indique : "Medicine on the Margins explores the ways in which Tibetan medical doctors have preserved and revitalized aspects of Tibetan medicine over the past fifty years. During decades of forced sociopolitical and economic upheaval in Tsang Province of China's Tibetan Autonomous Region--with medical texts destroyed or hidden, teachers and lamas imprisoned or otherwise silenced, and almost all trade in medicinal ingredients halted--they had little hope that their 'science of healing' (Sowa Rigpa) would again flourish. Today, however, Tibetan medicine is in vogue, promoted by the Chinese Communist Party as a pillar industry of Tibet and a valuable asset of Tibetans' 'nationality minority culture.' For urban Tibetans, traditional medicine is one of the few areas where a relatively liberal expression of Tibetan identity and language is possible. In urban, medically pluralistic settings it is an easily available resource, while in remote areas, its practice and transmission to the younger generation faces many challenges. The passing away of the last practitioner of a certain pulse-reading or compounding of an herbal formula, for example, could mean the end of a long chain of transmission. For reasons of lack of access, continued repression of nonofficial histories, fear, and loss of living memory, Tibetan medical doctors--the so-called amchi--have been little studied. This volume presents their story, showing how

practitioners from Tsang have retained crucial links in the teaching of medical knowledge despite the near-annihilation of monastic Buddhism and 'medical houses.'
