Nota di bibliografia	Includes bibliographical references (pages 43-51).
Sommario/riassunto	Pain resulting from polytraumatic injuries poses numerous challenges during and after rehabilitation treatment. The objectives of this report are to systematically review the literature to address the assessment and management of pain in patients with polytraumatic injuries, to identify patient, clinician and systems factors associated with pain-related outcomes in these patients, and to describe current or planned research addressing the key questions in this report.
