Sommario/riassunto

This timely volume provides an up-to-date exploration of the affective profiles model, a person-centered means of understanding the affective system. It presents the etiology underpinning the affective system and compares the model with other existing personality models, such as the Big Five Model, and the Cloninger's Biopsychosocial Model. Most important, it examines the affective profiles model in relation to well-being, which includes life satisfaction, as well as psychological health. As such, it illuminates the problems of depression, anxiety, and sleep disorders. Based on a wealth of longitudinal, cross-cultural and intervention studies, this book offers a critical view of the affective profiles model that will enrich both further research and clinical practice.
