

1. Record Nr.	UNINA9910701398403321
Titolo	Coastline extractor
Pubbl/distr/stampa	[Silver Spring, Md.], : National Oceanic and Atmospheric Administration, National Geophysical Data Center
Descrizione fisica	1 online database
Altri autori (Persone)	SignellRichard P
Soggetti	Coasts Submarine geology Geographic information systems. Maps.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	A searchable database that allows users to extract and plot coastline segments bounded by a specified latitude/longitude range. Underlying data comprise four international and national datasets. ASCII data may be returned compressed or uncompressed; if compressed, then ASCII files for coast formatting are available for return in a variety of formats (ArcInfo, Matlab, S-Plus, and Mapgen) before downloading. Created by Rich Signell. Hosted and maintained for Rich Signell by the NOAA/National Geophysical Data Center, Marine Geology and Geophysics Division.
