

1. Record Nr.	UNINA9910702867803321
Titolo	Attention deficit hyperactivity disorder : from genes to patients // edited by David Gozal, Dennis L. Molfese
Pubbl/distr/stampa	Totowa, N.J., : Humana Press, c2005
ISBN	1-280-35930-7 1-59259-891-9 9786610359301 9781592598915
Descrizione fisica	1 online resource (XII, 560 pages) : illustrations ; ; digital file (PDF)
Collana	Contemporary clinical neuroscience
Altri autori (Persone)	GozalDavid MolfeseDennis L
Disciplina	618.92/8589
Soggetti	Attention-deficit hyperactivity disorder Behavior disorders in children
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	Attention deficit hyperactivity disorder (ADHD) is a common neurobehavioral disorder affecting 5–10% of children and adolescents and 3% of adults. Attention Deficit Hyperactivity Disorder: From Genes to Patients aims to provide a comprehensive, state-of-the-art overview of the critical aspects of ADHD, and hopefully will serve as a quick and up-to-date reference source for professionals with an interest in ADHD. The book is divided into three major areas that follow an historical survey. The first group of chapters deals with current theories on the pathophysiology of ADHD, and focuses on neurotransmitters and the contributions and validity of animal models. The second section emphasizes the evaluation and treatment of patients with ADHD, from the day-to-day approach by the clinical psychologist to the more sophisticated anatomical and functional imaging strategies that have emerged in the last decade. In addition, chapters dealing with specific impairments, such as those pertaining to reading, social interaction, and working memory, are also included for more detailed analysis of these important aspects and their respective contributions to global

functioning. The third and final section provides an expanded review on the pharmacotherapy of ADHD and the appropriate methods for selection of specific drugs for individual patients based on drug kinetics and gene expression
