Livello bibliografico	Monografia
Note generali	Title from title screen (viewed on Dec. 24, 2013).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Grim greenery -- Deadly nightshade -- Wicked water hemlock -- Menacing manchineel -- Awful oleander -- Miserable monkshood -- Killer castor bean plant -- Ruthless rhubarb -- Why plants make poisons.
Sommario/riassunto	"Who doesn't enjoy a beautiful flower garden, an orchard filled with fruit trees, or a lush green forest? But a surprising number of plants-- often colorful, lovely ones--can be lethal. Readers of this engaging volume learn about some of Earth's deadliest plants, several of which are commonly found in gardens. They include oleander, rhododendrons, rhubarb, castor bean plants, and deadly nightshade. Age-appropriate text highlights important elementary science concepts, and colorful photos bring the text to life. Captions, fact boxes, and a graphic organizer enrich the main text"--
