   Sommario/riassunto RAPID is a stand-alone program specifically designed to convert raw
                       instrument voltages collected during such tests into meaningful units.
                       The reduced data can also be used alone or in combinations to obtain
                       quantities that require more than minimal data reduction.
