

1. Record Nr.	UNINA9910709753303321
Titolo	Scientific assessment of ozone depletion
Pubbl/distr/stampa	Washington, DC : , : National Aeronautics and Space Administration : , : National Oceanic and Atmospheric Administration London, United Kingdom : , : United Kingdom Department of the Environment Nairobi, Kenya : , : United Nations Environment Program Geneva, Switzerland : , : World Meteorological Organization, , 1991-
Descrizione fisica	1 online resource (volumes) : illustrations, maps
Collana	Report / World Meteorological Organization, Global Ozone Research and Monitoring Project
Soggetti	Ozone layer Ozone layer depletion Atmospheric ozone Atmospheric chemistry Global warming
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Periodico
Note generali	"An international agreement known as the Montreal Protocol on Substances That Deplete the Ozone Layer was reached in 1987. Through that agreement and its subsequent amendments and adjustments, many nations of the world have carried out policies to reduce and then phase out their use of ozone-depleting chemicals. The Montreal Protocol also called for the international scientific community to periodically update governments on the latest scientific findings related to the ozone layer. Conducted under the auspices of the World Meteorological Organization (WMO) and the United Nations Environment Programme (UNEP) and co-sponsored by NASA, NOAA, and the European Commission, these periodic "state-of-the-science" assessments have guided policymakers as they strengthened the original provisions of the Montreal Protocol. Together with colleagues at NASA, other NOAA laboratories, and other scientific institutions across the U.S. and around the world, CSD (formerly the Aeronomy Laboratory) has played a leading role in preparing these assessments" --Publisher website.
