

1. Record Nr.	UNINA9910709753603321
Titolo	Atmospheric ozone: assessment of our understanding of the processes controlling its present distribution and change
Pubbl/distr/stampa	Greenbelt, Maryland : , : National Aeronautics and Space Administration Washington, D.C. : , : Federal Aviation Administration : , : National Oceanic and Atmospheric Administration Nairobi, Kenya : , : United Nations Environment Program Geneva, Switzerland : , : World Meteorological Organization Brussels, Belgium : , : Commission of the European Communities Munchen : , : Bundesministerium fur Forschung und Technologie, , 1985
Descrizione fisica	1 online resource (1 volume) : illustrations, maps
Collana	World Meteorological Organization global ozone research and monitoring project report ; ; no. 16
Soggetti	Atmospheric ozone Ozone layer Ozone layer depletion Atmospheric chemistry Global warming
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Periodico
Note generali	"An international agreement known as the Montreal Protocol on Substances That Deplete the Ozone Layer was reached in 1987. Through that agreement and its subsequent amendments and adjustments, many nations of the world have carried out policies to reduce and then phase out their use of ozone-depleting chemicals. The Montreal Protocol also called for the international scientific community to periodically update governments on the latest scientific findings related to the ozone layer. Conducted under the auspices of the World Meteorological Organization (WMO) and the United Nations Environment Programme (UNEP) and co-sponsored by NASA, NOAA, and the European Commission, these periodic "state-of-the-science" assessments have guided policymakers as they strengthened the original provisions of the Montreal Protocol. Together with colleagues at NASA, other NOAA laboratories, and other scientific institutions

across the U.S. and around the world, CSD (formerly the Aeronomy Laboratory) has played a leading role in preparing these assessments"
