Sommario/riassunto

The Engineering Principles for Information Technology (IT) Security (EP-ITS) presents a list of system-level security principles to be considered in the design, development, and operation of an information system. Ideally, the principles presented here would be used from the onset of a program at the beginning of, or during the design phase and then employed throughout the systems life-cycle. However, these principles are also helpful in affirming and confirming the security posture of already deployed information systems. The principles are short and concise and can be used by organizations to develop their system life-cycle policies.

Sommario/riassunto	In July, 2008, the International Association for Assyriology met in Würzburg, Germany, for 5 days to deliver and listen to papers on the theme "Organization, Representation, and Symbols of Power in the

Ancient Near East.” This volume, the proceedings of the conference, contains 70 of the papers read at the 54th annual Rencontre, including most of the papers from two workshop sessions, one on “collective governance” and the other on “the public and the state.” As the photo of the participants on the back cover demonstrates, the surroundings and ambience of the host city and university provided a wonderful backdrop for the meetings.
