

1. Record Nr.	UNINA9910711180303321
Autore	Polk W. Timothy
Titolo	Security issues in the database language SQL // W. Timothy Polk, Lawrence E. Bassham, III
Pubbl/distr/stampa	Gaithersburg, MD : , : U.S. Dept. of Commerce, National Institute of Standards and Technology, , 1993
Descrizione fisica	1 online resource
Collana	NIST special publication ; ; 800-8
Altri autori (Persone)	BasshamLawrence E PolkW. Timothy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	1993. Contributed record: Metadata reviewed, not verified. Some fields updated by batch processes. Title from PDF title page. Withdrawn.
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	The Database Language SQL (SQL) is a standard interface for accessing and manipulating relational databases. An SQL-compliant database management system (DBMS) will include a minimum level of functionality in a variety of areas. However, many additional areas are left unspecified by the SQL standard. In addition, there are multiple versions of the SQL standard; the functionality will vary according to the particular version. This document examines the security functionality that might be required of relational DBMS's, and compares them with the requirements and options of the SQL specifications. The comparison will show that the security functionality of an SQL-compliant DBMS may vary greatly. A variety of security policies are considered which can be supported by SQL. The document ends by showing which types of functions are required by the examined security policies.
