   Sommario/riassunto   This text contains the proceedings of a workshop on software
                        develoDment tools, held at Pingree Park, Colorado in May, 1979. The
                        workshop, for which we were co-chair- men, was primarily, but not
                        exclusively, concerned with a variety of tools supporting pre-
                        implementation phases of software development. The workshop
                        brought together researchers and practitioners from industrial,
                        governmental, and academic sectors to compare and assess current
                        work and to set some directions for future work in this emerging
                        technical area. The fifty participants represented research and
                        development efforts in software tools within the United States, Canada,
                        France, Great Britain, and Japan. (A list of participants appears at the
                        end of the text.) Sponsorship was provided by the National Aeronautics
                        and Space Administration, the National Bureau of Standards, the
                        National Science Foundation, and Digital Equipment Corporation. The
                        conference consisted of seven formal sessions and numerous
                        organized and impromptu discussions. Each session (except the last)
                        included invited papers, prepared remarks by discussants, and an open
                        discussion.
