

1. Record Nr.	UNINA9910717350203321
Autore	Gonzalez Mark A.
Titolo	Proper functioning condition assessment for lentic areas / / Mark A. Gonzalez, Steven J. Smith
Pubbl/distr/stampa	Denver, Colo. : , : U.S. Department of the Interior, Bureau of Land Management, National Operations Center, , 2020
Edizione	[Third edition, 2020.]
Descrizione fisica	1 online resource (ix, 222 pages) : color illustrations, charts, forms
Collana	Riparian area management Technical reference ; ; 1737-16
Soggetti	Riparian areas - United States - Management Wetland conservation - United States Stream conservation - United States Environmental monitoring - United States Environmental impact analysis - United States Environmental impact analysis Environmental monitoring Riparian areas - Management Stream conservation Wetland conservation United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"BLM/OC/ST-20/003+1737." Contributors from original working group and second edition working group: Don Prichard, Forrest Berg, Warren Hagenbuck, Russ Krapf, Robert Leinard, Steve Leonard, Marry Manning, Chris Noble, Janice Staats, Melissa Dickard, Wayne Elmore, and Dave Smith.
Nota di bibliografia	Includes bibliographical references (pages 210-222).
Sommario/riassunto	"This technical reference (TR) provides instructions for the application of the lentic proper functioning condition (PFC) protocol. It is not intended to serve as a textbook addressing every aspect of lentic area and riparian-wetland function and ecology. The lentic PFC protocol addresses the physical functioning of perennial or intermittent lentic

riparian-wetland systems, such as swamps, ponds, or marshes ... The PFC assessment protocol is not intended for use on ephemeral systems, which do not support the vegetation, riparian-wetland functions, and values that depend on extended periods of available free water in the soil"--Page 3.
