

1. Record Nr.	UNINA9910717422203321
Titolo	Evaluating participatory mapping software // edited by Charla M. Burnett
Pubbl/distr/stampa	Cham, Switzerland : , : Springer Nature Switzerland AG, , [2023] ©2023
ISBN	3-031-19594-9
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (XXV, 265 p. 69 illus., 64 illus. in color.)
Disciplina	910.28553
Soggetti	Cartography - Computer programs Digital mapping Geospatial data - Computer processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chapter 1: Introduction to Participatory Mapping Software and Evaluation -- Chapter 2: Collector for ArcGIS -- Chapter 3: Field Papers -- Chapter 4: GeoODK -- Chapter 5: Maptionnaire -- Chapter 6: KoBoToolbox -- Chapter 7: SeaSketch -- Chapter 8: Sapelli -- Chapter 9: Survey123 -- Chapter 10: Ushahidi -- Chapter 11: Mapeo -- Chapter 12: Terrastories -- Chapter 13: Portable OpenStreetMap -- Chapter 14: MapBox -- Chapter 15: Trends and Conclusions.
Sommario/riassunto	This volume provides a framework for evaluating geospatial software for participatory mapping. The evaluation is based on ten key indicators: ethics, cost, technical level, inclusiveness, data accuracy, data privacy, analytical capacity, visualization capacity, openness, and accessibility (i.e., mobile friendly or offline capabilities). Each application is evaluated by a user and cross analyzed with specific case studies of the software's real-world application. This framework does not discriminate against assessing volunteered geographic information (VGI) applications, as a form of participatory mapping, in circumstances that its application is spearheaded by underrepresented groups with the intent to empower and spark political or behavioral change within formal and informal institutions. Each chapter follows a strict template to ensure that the information within the volume can be updated

periodically to match the ever-changing technological environment. The book covers twelve different mapping applications with the goal of creating a comparative evaluation framework that can be easily interpreted by convening institutions and novice users. This will also help identify gaps in software for participatory mapping which will help to inform application development in the future and updates to current geospatial software.
