Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Chapter 1. Standard optimal taxation with single agents: what it is and what to use in its place -- Chapter 2. Optimal taxation in the presence of household production -- Chapter 3. Income taxation with two-person households -- Chapter 4. Income taxation and public spending with two-person households -- Chapter 5. The scal treatment of family size: an overview -- Chapter 6. The scal treatment of family size: a further look -- Chapter 7. The tax treatment of children when parents act non-cooperatively: a preliminary account.
Sommario/riassunto	This book reflects the reality of most taxpayers. It provides a comprehensive and up-to-date treatment of optimal tax issues from a household economics perspective. A unified and integrated approach is employed to analyze optimal taxation in a homogeneous way. The author adopts a household production approach to allow a critical understanding of the way tax policy impacts economic agents. This way home activities can be studied with the same toolbox normally employed for the market activities. This is motivated by the fact that in reality most agents act from within a family, and their interaction with

the economy at large and tax policy in particular is mediated by the interdependence of the family members' choices, although taxation is typically studied in a framework in which the economic agents are isolated individuals. The aim of the book is to provide, a comprehensive treatment of family taxation within this approach, focusing on the normative side – social welfare maximising taxation. As a consequence of the book's analysis, many important and established results in public economics may have to be revised. The book will be useful to both graduate students and researchers alike in that it adopts a rigorous analytical language but also includes ample intuitive explanations.
