

1. Record Nr.	UNISA996395421403316
Autore	Huggarde Miles
Titolo	The displaying of the Protestantes [[electronic resource]] : and sondry their practises, with a description of diuers their abuses of late frequented within their malignaunte church. Perused and set furth with thassent [sic] of authoritie, accordyng too the ordre in that behalfe appoynted
Pubbl/distr/stampa	Excusum Londini, : in ædibus Roberti Caly, typographi, mense Iunij. anno. 1556
Descrizione fisica	[4], 99 leaves
Soggetti	Protestantism
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	By Miles Huggarde [or Hogarde]--STC. At foot of title page: Cum priuilegio. Reproduction of original in the Peterborough Cathedral, Peterborough, England.
Sommario/riassunto	eebo-0124

2. Record Nr.	UNINA9910725059303321
Autore	Moulin Charles-Henri
Titolo	Livestock grazing systems and sustainable development in the Mediterranean and Tropical areas // Charles-Henri Moulin and Alexandre Ickowicz
Pubbl/distr/stampa	Versailles Cedex, France : , : editions Quae, , 2023
Descrizione fisica	1 online resource
Collana	Matière à débattre et Décider Series
Disciplina	636.082
Soggetti	Animal breeding
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Family-run ruminant pasture farms in Mediterranean and tropical territories contribute directly to eight of the seventeen Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda. For a long time, these farms have been on the fringe of agricultural investment efforts. However, they have undeniable assets for meeting these SDGs in interaction with other forms of livestock farming present in the territories. However, they also face a number of constraints that call into question their sustainability. The interdisciplinary synthesis presented here aims to answer three key questions: How can the adaptive capacities of these livestock farms be strengthened to respond to climatic, social and economic changes? How can their efficiency be improved at different levels of organisation and at social, economic and environmental levels? Finally, how can these farms contribute to innovation processes for the agro-ecological transition? This book is based on research recently published by the UMR Selmec (CIRAD-INRAE-Institut Agro) on a variety of sites around the world and in a broad international partnership. It is intended for the teaching and scientific community, students, and stakeholders in the livestock sector and in the territories, working at different decision-making levels.</p>
