Sommario/riassunto	<p>Cardiac biomarkers such as troponins and natriuretic peptides have made a great impact on clinical decision making as well as improving our understanding of molecular mechanisms of different disease conditions. However, the biomarkers that are currently in use do not reflect all the multiple disease pathways that are involved in a broad spectrum of cardiac disease conditions ranging from acute coronary syndrome, to heart failure (and heart failure with preserved ejection fraction, HFpEF), to pulmonary hypertension or arrhythmias. In this Special Issue, we will provide an overview of the current developments in the field of biomarker research, beginning with research on molecular pathways and cellular communication (e.g., microRNA) up to the clinical use of biomarkers.</p>

Sommario/riassunto

This book is devoted to strengthening the theoretical and methodological basis, systematization of international experience, and scientific elaboration of prospects for developing a climate-smart economy and business as a vector of the sustainable development of Industry 4.0 in the Decade of Action. The first part of the book focuses on climate-responsible entrepreneurship in support of the sustainable development of Industry 4.0. The part systematizes best practices for climate-smart green innovations across sectors of the digital economy. The third part reveals the experience of climate risk management based on smart green innovations in regions and countries. Particular attention is paid to the best practices of the European Union (EU) and the Eurasian Economic Union (EAEU). The book ends with part four, which explores ESG climate risk management and green finance in support of combating climate change. The book's novelty is that it rethinks the environmental footprints of Industry 4.0 from the perspective of climate risks and their management. The theoretical significance of the book lies in the formation of an innovative concept of climate change risk management, in which the economy, society, nature, and technology are presented and interact effectively. The book is intended for scientists. In this book, they will find an innovative and systemic vision of smart green innovations in Industry 4.0 for climate change risk management. .

Sommario/riassunto

"Few things make Japanese adults feel quite as anxious today as the phenomenon called the "child crisis." Various media teem with intense debates about bullying in schools, child poverty, child suicides, violent crimes committed by children, the rise of socially withdrawn youngsters, and forceful moves by the government to introduce a more conservative educational curriculum. These issues have propelled Japan into the center of a set of global conversations about the nature of children and how to raise them. Engaging both the history of children and childhood and the history of emotions, contributors to this volume track Japanese childhood through a number of historical scenarios. Such explorations--some from Japan's early-modern past--are revealed through letters, diaries, memoirs, family and household records, and religious polemics about promising, rambunctious, sickly, happy, and dutiful youngsters."--Provided by publisher.
