

1. Record Nr.	UNINA9910725932203321
Autore	Ranise Silvio
Titolo	SACMAT '23 : Proceedings of the 28th ACM Symposium on Access Control Models and Technologies // Silvio Ranise
Pubbl/distr/stampa	New York : , : Association for Computing Machinery, , 2023
Descrizione fisica	1 online resource (218 pages)
Disciplina	005.8
Soggetti	Computer networks - Security measures Computers - Access control
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	It is our great pleasure to welcome you to the 28th ACM Symposium on Access Control Models and Technologies (SACMAT 2023). This year's symposium continues its tradition of being the premier venue for presenting research results and experience reports on cutting edge advances on access control, including models, systems, applications, and theory, while also embracing a renovated focus on the general area of computer security. The overarching goal of the symposium is to share novel access control and computer security solutions that fulfill the needs of emerging applications and environments, and also to identify new directions for future research and development. ACM SACMAT provides researchers and also practitioners with a unique opportunity to share their perspectives with others interested in the various aspects of access control and computer security. Like last year, we had two submission cycles, one in Fall 2022 and another in Spring 2023. We received a total of 49 submissions from different countries around the world.
