

1. Record Nr.	UNINA9910726281603321
Autore	Akram Muhammad
Titolo	Multi-criteria Decision Making Methods with Bipolar Fuzzy Sets // by Muhammad Akram, Shumaiza, José Carlos Rodríguez Alcantud
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2023
ISBN	9789819905690 9789819905683
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (232 pages)
Collana	Forum for Interdisciplinary Mathematics, , 2364-6756
Altri autori (Persone)	Shumaiza Rodríguez Alcantud José Carlos
Disciplina	658.403
Soggetti	Operations research Mathematical optimization Set theory Mathematics Operations Research and Decision Theory Optimization Set Theory Applications of Mathematics Presa de decisions multicriteri Conjunts borrosos Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1. TOPSIS and ELECTRE-I Methodologies: Bipolar Fuzzy Formulations -- 2. TOPSIS Method with Trapezoidal Bipolar Fuzzy Numbers -- 3. VIKOR Method with Trapezoidal Bipolar Fuzzy Sets. - 4. Extended VIKOR Method Based on Complex Bipolar Fuzzy Sets -- 5. Beyond ELECTRE I: A Bipolar Fuzzy ELECTRE II Method -- 6. Extended PROMETHEE Method with Bipolar Fuzzy Sets -- 7. Enhanced Decision-Making Method with Two-Tuple Linguistic Bipolar Fuzzy Sets.
Sommario/riassunto	This monograph discusses the theoretical and practical development of multicriteria decision making (MCDM). The main purpose of MCDM is the construction of systematized strategies for the "optimisation" of

feasible options, as well as the justification of why some alternatives can be declared "optimal". However, at time, we must make decisions in an uncertain environment and such inconvenience gives rise to a much more elaborate scenario. This book highlights models where this lack of certainty can be flexibly fitted in and goes on to explore valuable strategies for making decisions under a multiplicity of criteria. Methods discussed include bipolar fuzzy TOPSIS method, bipolar fuzzy ELECTRE-I method, bipolar fuzzy ELECTRE-II method, bipolar fuzzy VIKOR method, bipolar fuzzy PROMETHEE method, and two-tuple linguistic bipolar fuzzy Heronian mean operators. This book is a valuable resource for researchers, computer scientists, and social scientists alike.
