

1. Record Nr.	UNINA9910728389303321
Autore	Macchi Andrea
Titolo	Problems in Classical Electromagnetism : 203 Exercises with Solutions / / by Andrea Macchi, Giovanni Moruzzi, Francesco Pegoraro
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2023
ISBN	3-031-22235-0
Edizione	[2nd ed. 2023.]
Descrizione fisica	1 online resource (587 pages)
Disciplina	537.076
Soggetti	Electrodynamics Atoms Molecules Telecommunication Mathematical physics Classical Electrodynamics Atomic, Molecular and Chemical Physics Microwaves, RF Engineering and Optical Communications Mathematical Physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1 Basics of Electrostatics -- 2 Electrostatics of Conductors -- 3 Electrostatics of Dielectric Media -- 4 Electric Currents -- 5 Magnetostatics -- 6 Magnetic Induction -- 7 Electromagnetic Oscillators and Wave Propagation -- 8 Maxwell Equations and Conservation Laws -- 9 Relativistic Transformations of the Fields -- 10 Radiation Emission and Scattering -- 11 Electromagnetic Waves in Matter -- 12 Transmission Lines, Waveguides -- Resonant Cavities -- 13 Additional Problems.
Sommario/riassunto	This second edition adds 46 new problems, for a total of 203. The solutions to certain "old" problems have been revised for improved clarity, in response to questions and comments from our students (second-year students in the Master's in Physics program). Each problem is given a title indicating its relation to the various areas of physics or technology. By tackling the problems presented here,

students are gently introduced to advanced topics such as unipolar and homopolar motors, magnetic monopoles, radiation pressure, angular momentum of light, bulk and surface plasmons, and radiation friction. We also address a number of tricky concepts and apparent ambiguities and paradoxes encountered in the classical theory of electromagnetism, with a particular focus on conservation laws and transformation properties between different frames of reference. At the same time, the book can be used as an introduction to applications of classical electromagnetism including cutting-edge topics like plasmonics, metamaterials, and light-driven propulsion. While unnecessary mathematical complexity is avoided, the new edition also provides a few introductory examples concerning elegant and powerful solution techniques. Hopefully the second edition offers an even better teaching tool for undergraduates in physics, mathematics, and electric engineering, and a valuable reference guide for students planning to work in optics, material science, electronics, and plasma physics.
