Nota di contenuto	Mueller-Matrix Modeling And Diagnostics Of Optically Anisotropic Biological Layers -- Materials And Method -- Mueller-Matrix Description Of The Optically Anisotropy Of Biological Layers -- Azimutally Invariant Mueller-Matrix Mapping Of Optically Anisotropic Networks Of Biological Tissues And Fluids -- Azimuthally Invariant Mueller-Matrix Reconstruction Of The Optical Anisotropy Parameters Of The Polycrystalline Structure Of Biological Tissues And Human Fluids -- Methods And Means Of Fourier-Stocks Polarimetry And Spatial-Frequency Filtering Of Phase Anisotropy Manifestations.
Sommario/riassunto	This book highlights the analysis of new azimuth-independent methods of Stokes polarimetry and Mueller-matrix reconstruction of distributions of optical anisotropy parameters using spatial-frequency filtering of manifestations of phase (linear and circular birefringence)

and amplitude (linear and circular dichroism) anisotropy for diagnosing changes in the orientational-phase structure of fibrillar networks of histological sections of biological tissues and polycrystalline films of biological fluids.
