Skills and educational

systems / Heike Solga and Herman G. van de Werfhorst -- 16. Skills and collective wage bargaining / Christian Kjellström and Irene Wennemo -- 17. Skills and macro-level economic inequality / Tomas Korpi, Michael Talhlin and Johan Westerman -- 18. Skilled work and ethics: How can we expand opportunities for meaningful work? / Andrea Veltman -- Index.

Sommario/riassunto

Skills and inequality have long been a central theme in analyses of social structure and economic development. A Research Agenda for Skills and Inequality offers an insightful cross-disciplinary framework for research on how unequal living conditions form, persist and change in interplay with human skill formation and development. Drawing on prominent new advances in the field, this incisive Research Agenda builds a forward-thinking framework for research. Spanning an extensive eighteen chapters, each examining a specific but major aspect of the general theme of skills and inequality, the book provides a comprehensive overview of links between the two. Against the backdrop of established insights from related but separate fields of inquiry, including economics, sociology, demography, human resource management, political science, philosophy and psychology, the Research Agenda presents an exciting overview of recent advances in analyses of skills and inequality. Opening vistas for future research based on extensive literature reviews and new findings, this Research Agenda offers compact, ground-breaking essays for students, policy makers, and advanced researchers in many disciplines including social policy, business management, and employment relations.
