

1. Record Nr.	UNINA9910729782903321
Autore	Zimmermann Olaf
Titolo	Decentralized scheduling of discrete production systems with limited buffers // Olaf Zimmermann
Pubbl/distr/stampa	Karlsruhe, Baden : , : KIT Scientific Publishing, , 2023
Descrizione fisica	1 online resource (210 pages)
Disciplina	658.5
Soggetti	Production planning
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Modern production systems have become more flexible and agile. For them, a suitable control and planning method is needed. Agent-based systems offer the required characteristics. The contributions of these work are a remodeling of the Shifting Bottleneck heuristic to include limited buffers, the development of a decentralized multi-agent system for production planning, and the adaptation of the heuristic to the agent system. It concludes with evaluations of real-world production systems.</p>
