| These proceedings contain research papers presented at the 5th<br>International Conference on Dynamics in Logistics, held in Bremen,<br>Germany, February 2016. The conference is concerned with dynamic<br>aspects of logistic processes and networks. The spectrum of topics<br>reaches from modeling, planning and control of processes over supply<br>chain management and maritime logistics to innovative technologies<br>and robotic applications for cyber-physical production and logistic<br>systems. The growing dynamic confronts the area of logistics with<br>completely new challenges: it must become possible to describe,<br>identify and analyze the process changes. Moreover, logistic processes<br>and networks must be redevised to be rapidly and flexibly adaptable to |
