Sommario/riassunto	This book offers fresh academic insights, reflections, questions, issues, and approaches to development ethics, taking into account, African values and ethics. Development ethics is an area of applied ethics that examines the moral issues involved in global, social, and economic transformation. While it is a relatively new discipline, there have been numerous scholarly publications on it from Western perspectives. However, only a few studies that focused on development ethics from the African perspective. To address this gap, the book seeks to answer critical questions such as "What does development mean to Africans?", "How can we measure development?", "Who gets to decide?", and "What constitutes just development in Africa?" With contributions from African scholars from diverse backgrounds, the book covers various development themes such as Theories and approaches to development ethics in Africa, Environmental Ethics and African Development, Ethics, Politics and African Development, Migration and African development, Gender, Ethics and Socio-economic Development in Africa, Education, Ethics and African development. It is an essential resource for researchers, lecturers, and students interested in political philosophy and African culture studies.
