

1. Record Nr.	UNINA9910737279403321
Autore	Jeng Dong-Sheng
Titolo	Porosity-elastic theory with applications to transport in Porous media // Dong-Sheng Jeng, Lin Cui
Pubbl/distr/stampa	Milton : , : Taylor & Francis Group, , 2023 ©2023
ISBN	9781032311913 1-000-87153-3 1-003-30853-8
Descrizione fisica	xvii, 474 pages : illustrations ; 24 cm
Altri autori (Persone)	CuiLin
Soggetti	Multiphase flow Porous materials - Fluid dynamics Elastic analysis (Engineering) Transport theory Ocean bottom Soil-structure interaction Offshore structures - Anchorage
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"Porosity-elastic theory can be widely applied to numerous engineering and scientific problems involving multi-phase media. This book for graduate students and researchers presents the basic mechanics of porosity-elastic theory and explores in detail three particular applications: solute and contaminant transport in compacted clay liner systems with consolidation effects; groundwater table fluctuations in coastal aquifers resulting from tidal dynamics; and basic seabed mechanisms under dynamic loading, affecting marine infrastructures. Most existing books in the field focus on the mechanics of porous flow with applications in environmental science. Open Access from http://www.taylorfrancis.com "--
