Autore	Bahrami Nick
Titolo	Evaluating factors controlling damage and productivity in tight gas reservoirs // Nick Bahrami
Pubbl/distr/stampa	New York : , : Springer, , 2013
ISBN	3-319-02481-7
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (xvi, 53 pages) : illustrations (chiefly color)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	622.3382
Soggetti	Gas reservoirs Natural gas - Geology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"ISSN: 2190-5053."
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction to tight gas reservoirs -- Tight gas reservoirs characterisation for dynamic parameters -- Tight gas reservoir simulation -- Tight gas field example: effect of damage mechanisms on well productivity -- Conclusions.
Sommario/riassunto	Tight gas reservoirs have very low permeability and porosity, which cannot be produced at economical flow rates unless the well is efficiently stimulated and completed using advanced and optimized technologies. Economical production on the basis of tight gas reservoirs is challenging in general, not only due to their very low permeability but also to several different forms of formation damage that can occur during drilling, completion, stimulation, and production operations. This study demonstrates in detail the effects of different well and reservoir static and dynamic parameters that influence damage mechanisms and well productivity in tight gas reservoirs. Geomechanics, petrophysics, production and reservoir engineering expertise for reservoir characterization is combined with a reservoir simulation approach and core analysis experiments to understand the optimum strategy for tight gas development, delivering improved well productivity and gas recovery.
