

1. Record Nr.	UNINA9910739476303321
Autore	Lampo Aniello
Titolo	Quantum Brownian Motion Revisited [[electronic resource]] : Extensions and Applications // by Aniello Lampo, Miguel Ángel García March, Maciej Lewenstein
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-030-16804-2
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (111 pages)
Collana	SpringerBriefs in Physics, , 2191-5423
Disciplina	530.475
Soggetti	Quantum physics Statistical physics Low temperature physics Low temperatures Quantum optics Phase transformations (Statistical physics) Condensed materials Quantum Physics Statistical Physics and Dynamical Systems Low Temperature Physics Quantum Optics Quantum Gases and Condensates
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Classical Brownian motion -- Quantum Brownian motion -- Non-linear quantum Brownian motion -- A Lindblad model for quantum Brownian motion -- Heisenberg equations approach -- Conclusions and perspectives -- Heisenberg principle for density operators -- Gaussian approximation -- Bibliography.
Sommario/riassunto	Quantum Brownian motion represents a paradigmatic model of open quantum system, namely a system inextricably coupled to the surrounding environment. Such a model is largely used in physics, for instance in quantum foundations to approach in a quantitative manner

the quantum-to-classical transition, but also for more practical purposes as the estimation of decoherence in quantum optics experiments. This book presents the main techniques aimed to treat the dynamics of the quantum Brownian particle: Born-Markov master equation, Lindblad equation and Heisenberg equations formalism. Particular attention is given to the interaction between the particle and the bath depends non-linearly on the position of the former. This generalization corresponds to the case in which the bath is not homogeneous. An immediate application is the Bose polaron, specifically an impurity embedded in an ultracold gas.
